DEVIATION FROM STAGE 1

Team ID: 36

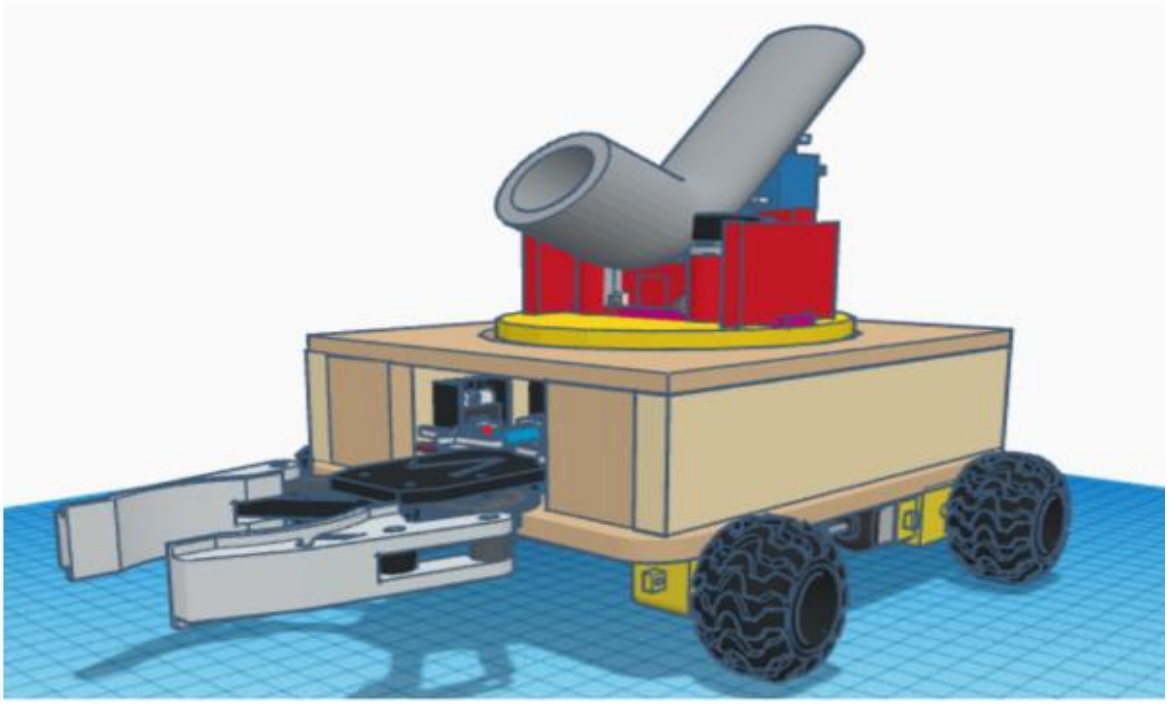

Team Name: *TECH-DECODERS*

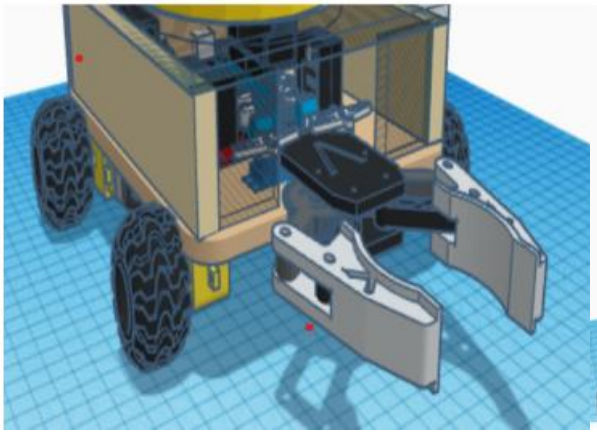

Mentor Name: *Mr. Shubham Jain*

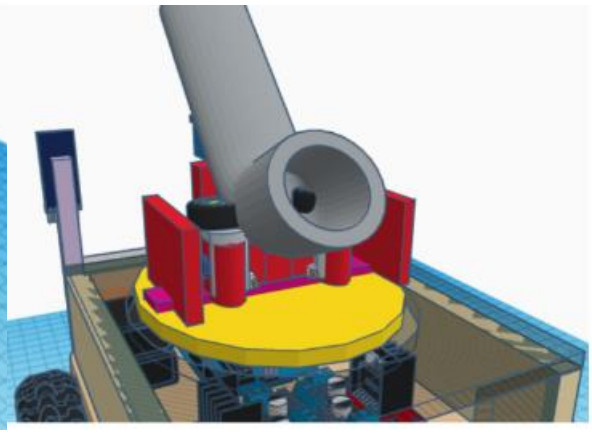

Team Members

Main	**Supporting**
1. Piyush	**7.** Lavish
2. Gurmeet Singh	**8.** Vainessa Sharma
3. Ashmit Raj Nishad	
4. Chirag	
5. Gaurav Joshi	

STAGE 1 CAD DESIGN

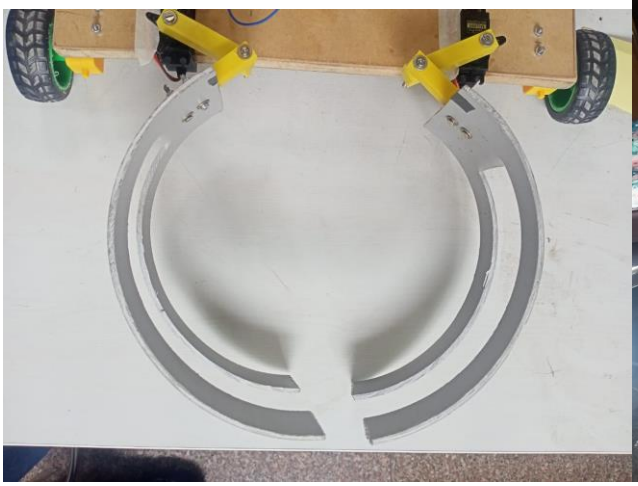

Grabber System

Shooting System

We change the Grabber System because of its very complex structure we will faced difficulty while making and controlling also.	Now we made the Shooting System with PVC pipe and change the shape of Shooting pipe because of higher weight of PVC pipe.

Wireless Communication :

Firstly, we decided to choose NRF Transreciever Module (Nrf24L01) for wireless communication due to facing many issues while transmitting and receiving data. Now, we decided to use HC-05 Bluetooth Module for transmitting and receiving data and make our robot.

Wheels & Motors :

Firstly, we decided to choose Mecanum Wheel for multi-directional movement and rotation. But the couplers of mecnum wheels are not available. So, we decided at the end to change the motors to RS-555 DC Motor.

NOTE: For video submission we used Bo Motors and Simple Wheels. But on the final, we use RS-555 DC Motor.

Circular Disc :

In Stage 1, we planned to rotate the Shooting Mechanism of Circular Disc. But we drop our plan because we facing some problem while mounting the shooting mechanism.
